

Pronto4 Strap-on Autonomy System

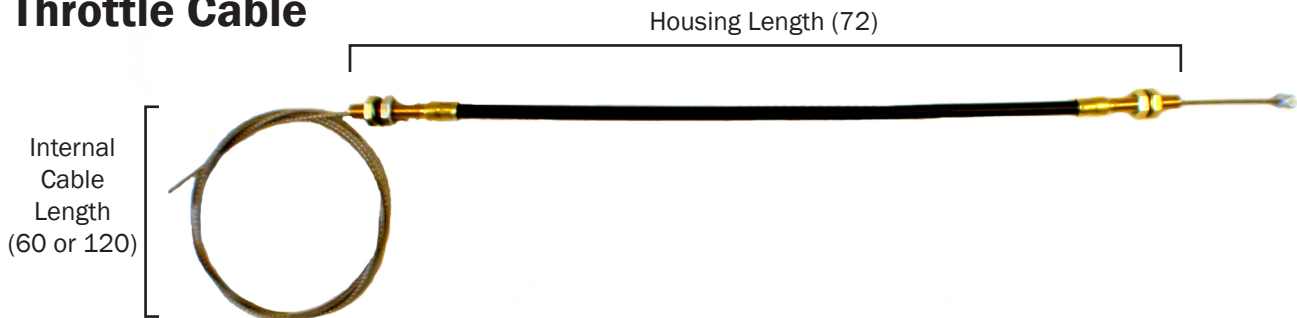

Actuator Cables

Transmission Cable

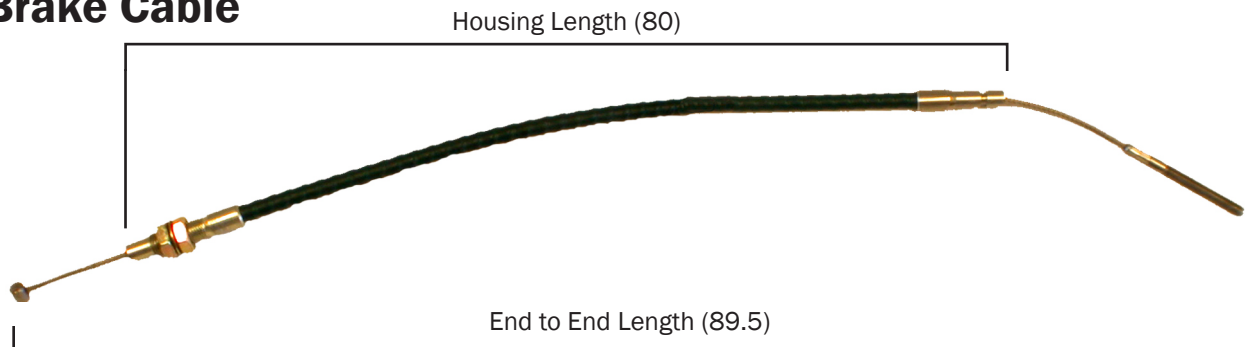

Transmission Push/Pull Cable, P/N: KA100-01-111: This cable has a standard reference number of 173L-TT-3-55, with the second number (3) representing the **throw length** (the distance required to move the transmission through its gears), and the last number in the segment (55.0) representing the **length in inches from end to end**. To determine the length of cable needed, you can measure from the transmission attachment point to the servo arm in the actuator module.

Throttle Cable

Throttle Push/Pull Cable, P/N: KA100-01-135: This cable has a standard reference number of 006-3-72.0-3-120, with the middle number (72.0) representing the distance from bracket to bracket (**housing length**). Different housing lengths can be ordered, but the **internal cable** (last number, 120.0) can only be ordered in lengths of 60 and 120 inches. This cable can then be cut as needed to fit.

Brake Cable

Brake Push/Pull Cable, P/N: KA100-01-146: This cable has a standard reference number of CA307-80.0-89.5, with the middle number (80.0) representing the **housing length** (distance from brake pedal mount to bracket), and the last number in the segment (88.0) representing the **end to end length** from the firewall to the brake actuator arm. The reference numbers are measured in inches, and different lengths of housing and cable can be ordered.
